SWEET LAKE FARM specializes in mowing, sowing and maintaining the vegetation on solar parks throughout the Netherlands. We use advanced and tailor-made mowing and sowing equipment, such as various radio-controlled mowers. This also allows mowing under the solar panels; after all, high vegetation does not only grow in the paths between the solar panels, but also between the panels. The shadow caused by this, causes loss of efficiency.

In combination with the mechanical maintenance, we can also use sheep for grazing solar parks. This brings the vegetation into balance with the natural environment and the organisms that live in it. Within the framework of biodiversity, a herb-rich grassland can be created that is attractive for grazing, insects, small animals and birds.

Based on your wishes, we are happy to draw up a plan of action to achieve the best possible result. We strive to involve local parties as much as possible in this process.

We already carry out green maintenance at the solar parks Avri in Geldermalsen, Scaldia in Vlissingen, Zonnedijk in Eemshaven, De Watering in Coevorden, Molenwaard in Kropswolde, Noordscheschut in Geesbrug and Fort de Pol in Zutphen.

Our clients include ib Vogt, Solarfields and Greensolver.
